What I mean is: I want to show the real time of some information (games news, sports news) on the app. When something happens in the future, i would like to show that to the user in the app. So my question is: How can I do it? A: You can use web

---

sockets to do so. In react-native, you can use react-native-web-socket-manager npm package. Here is a sample code using web sockets (caveat: it is an example).

```
import React, { Component } from 'react';
import WebSocket from 'react-native-web-socket-manager'; // The OnMessage function will be called on receiving a message from the // web socket
export default class App extends Component {
```
