Category:MAME Mame

0.37b11 romset listThe present invention is directed to a rechargeable battery. More particularly, the present invention is directed to a rechargeable battery having improved intercell interference resistance. A conventional rechargeable battery such as, for example, a lithium ion

battery includes a negative electrode, a positive electrode, a separator between the electrodes, and an electrolyte solution. The negative and positive electrodes have a terminal provided on the respective surfaces thereof. The negative terminal is connected to the negative electrode, and the positive terminal is connected to the positive electrode. The separator has a

terminal provided on the surface thereof. The separator is arranged between the negative and positive electrodes. The electrolyte solution contains lithium salt and is arranged between the negative electrode and the positive electrode. The electrodes and the separator are enclosed by a metal container. The rechargeable battery is repeatedly charged and

discharged. During the charging and discharging, energy is generated. For example, during the charging of the rechargeable battery, chemical reactions, including an oxidation reaction and a reduction reaction, occur in the negative electrode and the positive electrode. Thus, lithium is removed from the negative electrode and inserted into the positive electrode.

During the discharging of the rechargeable battery, chemical reactions, including an oxidation reaction and a reduction reaction, occur in the positive electrode and the negative electrode. Thus, lithium is removed from the positive electrode and inserted into the negative electrode. As described above, the rechargeable battery functions to generate electricity. The

rechargeable battery described above is arranged in an electronic device such as, for example, a mobile phone. The rechargeable battery is repeatedly charged and discharged. As a result, power is consumed. Thus, it is important to know how much power remains in the rechargeable battery.
