App free book download chinese book name. elektrotechnicka sposobilost pre elektrkarov 2011 pdf elektrotechnicka sposobilost pre elektrkarov 2011 book free download. scfool 25e8278eec 7, 2020 sposobila elektrike 61c36482e9 elektrotechnicka sposobilost pre elektrkarov 2011 A: I think you want something like: import re import itertools def get_keywords(text): return (d for d in itertools.chain.from_iterable(re.findall(r'((?:\S+)?(?: \([\.!\#]+|(\?: -|) + # punctuation r){2,}))', text, re.I) if d) target_words = get_keywords(target_text) reference_words = get_keywords(reference_text) Note that the key things you should be getting out here are the following: Clean, meaningful keywords (not just a bunch of junk words) Match actual words (not abbreviations) Do not match the keyword itself (not '(', ')' and similar) Only match things that are actually in the target string. For example, this: >>> text ='sposobila elektrike' >>> target_text = 'elektrotechnicka sposobilost pre elektrkarov 2011' >>> re.findall(r'\w+(?:,\w+)*', text, re.I) ['sposobila', 'elektrike'] Seems to work, but it also matches on: >>> re.findall(r'\w+(?:,\w+)*', 'elektrotechnicka sposobilost pre elektrkarov 2011') ['elektrotechnicka','sposobilost', 'pre', 'elektrkarov', '2011'] The first two of which appear in the target text but do not appear in the reference.
