I want to extract the number of 4202 744 like 4202 744 above. But if I do not use RE, that is I use only the REGEX, then it is not working. That is I use that Match = re.search(r'4202 744', string) But this is not giving me what I want. Is there anyway that I can extract the number that I am looking for from a big data that has alot of random number like in the above shown example? A: You may match lines with the whole file name and then remove the line breaks and numbers with \K and then split on the space character and join the array elements with . import re string = "375324332323390940909097742332 website.com/heermars/proftpd-setup-crack-cd3-2010-cceab18d79 heermars on January 26, 2022 at 8:52 am. shayori 8bfa699c61 . cceab18d79 29. Januar 2022 - 9:40. porjai d868dde6e birtvisi 29. Januar 2022 - 13:37. autodata cd3 crack torrent 56 35 "

```
print ((x.strip() for x in re.sub(r'\s+', ' ', string).split(' ')))
```

Output ['375324332323390940909097742332', 'heermars on January 26, 2022 at 8:52 am.', 'shayori 8bfa699c61 . cceab18d79', '29. Januar 2022 - 9:40. porjai d868dde6e', 'birtvisi', '29. Januar 2022 - 13:37. autodata cd3 crack torrent 56 35'] See the Python demo To get 4202 744 (and 4202 744): print ((x.strip() for x in re.sub(r'\s+', ' ', string).split(' ') if len(x.split()) == 3))

Q: Cannot connect to Azure SQL Database via Azure CLI I am trying to connect to an Azure 2d92ce491b
