We're entering our 12th year as a local business. We're in our 2nd year as a family owned business. We've become more than just a "buy it" store. We've become a full service beauty destination. If you haven't been in to visit us yet, you're missing out. We want to share our mission and passion for the beauty products and service we have to offer.The present invention is directed to a portable game stand and particularly a game stand that may be placed on a bathroom vanity or a table. Game stands are well known in the art, and many are highly specific in purpose. Often a game stand is specifically designed to serve a specific purpose. In this regard, many game stands are too large and too heavy to be moved from room to room. In other cases, game stands are specialized to certain purposes, such as designed to work in conjunction with a particular game such as golf, or tennis. What is lacking in the art is a game stand that can be easily and quickly deployed to a game such as tennis or golf, yet is small enough to be easily moved from room to room. Thus, there is a need in the art for a game stand that can be deployed quickly and easily to a specific use without becoming fixed to a certain purpose.Q: Sorting a big table in mysql I have a table with 3 million rows. I have a function which returns 10 most recent records for each month, this is done by using a date range. As of now my query runs for more than a day with no errors, but it is not returning the correct data. It returns the data from the last day of the

month and not the 10 most recent. Is there a way I can optimize this to run faster? Below is my query SELECT * FROM (SELECT DATE_FORMAT(date_time,'%Y-%m-%
