[R.R. at 31a-41a; 40a.] It is further undisputed that on October 7, 2004, Claimant filed a petition to compel the payment of temporary disability benefits that were unpaid following the termination of her temporary total disability benefits. [R.R. at 57a-59a.] Claimant testified that a representative of Employer's insurance carrier advised her that the temporary total disability benefits had been terminated, but that the carrier had not received any request to reinstate those benefits and that the carrier had no record of receiving any such request. [R.R. at 40a-41a, 50a-52a.] Claimant's Petition, filed on October 7, 2004, asked the Board to direct the carrier to reinstate the benefits. [R.R. at 59a-60a.] In its answer, Employer admitted that Claimant's benefits had been terminated on January 10, 2004, but denied that Claimant's benefits were unpaid. [R.R. at 57a.] The ALJ found that Claimant was discharged from temporary total disability status on January 10, 2004, and that, as of that

### What's New in the Embarcadero DB Change Manager?

Reported problems: 1. Deleting Snapshots causes DB to lose state Cause: A snapshot is a snapshot of the database - it saves the current state of the database, and then you can roll back to it later if something goes wrong. If you delete the snapshot, there is no way to rollback to it, and the database is destroyed. 2. Changesets which were applied by setting the "Is Hidden" property to True do not show up in the DB Change Reporter Cause: The "Is Hidden" property is a bitfield which is only displayed for changesets which have been hidden from the DB Change Reporter. For some reason, when the database is hidden, the bitfield becomes set to one instead of zero. This is an issue with some versions of the reporter. 3. Failed backup creates a corrupt version of the database Cause: In earlier versions of the SQL Engine, backups could not be named, meaning that if the backup failed, the database would get overwritten with a corrupted version, or even a version with the file size 0 (zero). This was fixed in SQL 2017, but DB Change Manager XE6 can still export a SQL backup to a file. 4. Backup crashes on Change Sets which are already present Cause: In earlier versions of the SQL Engine, backups could not be named, meaning that if the backup failed, the database would get overwritten with a corrupted version, or even a version with the file size 0 (zero). This was fixed in SQL 2017, but DB Change Manager XE6 can still export a SQL backup to a file. 5. DB Change Manager appears to be corrupting backups on backups Cause: DB Change Manager exports backups which are only valid for the version of the database being managed. In earlier versions of the SQL Engine, backups could not be named, meaning that if the backup failed, the database would get overwritten with a corrupted version, or even a version with the file size 0 (zero). This was fixed in SQL 2017, but DB Change Manager XE6 can still export a SQL backup to a file. Solution: Upgrade to a newer version of the SQL Engine.
