Q: Converting a string to hexadecimal (and back) I have a string of the form "0x1234", how do I convert it to the hexadecimal representation 0x1234? From the linked post, I am able to convert it back. The reverse conversion is: int h = DecimalFormat.getInstance().parse("0x1234", Integer.class).intValue(); String s = h.toString(); //=>0x1234 String s2 = Integer.toString(h, 16); //=> 0x1234 int i = Integer.parseInt(s2, 16); System.out.println(i); A: In Java, Hex is a representation of numbers and not a number itself. Hence, you will need to use BigInteger. A: The two answers by @andrew-wang and @Borg Kreuz were

excellent and proved an excellent answer. However, I was digging through the entire class hierarchy of java.lang.Number just because I was curious. And I found this: longNumber.toHexString(Integer.MAX_VALUE); // -> 0xffffffffffffffff longNumber.toHexString(0); // -> 0x00000000 longNumber.toHexString(-1); // -> 0xffffffffffffffff So I guess, it works now. :-) Arizona Cardinals 2017 NBA Draft: The Top 10 Best Available Picks This draft class has so many high-end athletic talents that it's hard to narrow down a list to just ten. Some are offensive prospects who have the potential to be weapons on the floor with a smart, well-organized coach. Others could help a team win a championship immediately, but with

the right guidance, could also develop into second- or third-year contributors. As Dave Zurinsky wrote for Rotoworld, "the Arizona Cardinals are really one of the best fan bases and teams in the NFL, and the passion they have during games is unlike any in football. Cardinals Nation has a fan base that is passionate about their team and making this fanbase one of the top in the NFL could really help the franchise land some top draft

Cytochrome P450 3A4 induction by garenoxacin in patients undergoing chronic hemodialysis: relationship to dose, concentration and clearance. Garenoxacin, a novel, highly potent, orally active, broad-

spectrum ciprofloxacin analogue, is eliminated through the kidneys with a half-life of approximately 7 hours in healthy volunteers. In a study of 8 subjects with chronic renal insufficiency on hemodialysis, garenoxacin was administered orally in doses ranging from 0.25 to 2.0 g/day for 6 days to establish a therapeutic dose. Pharmacokinetic/pharmacodynamic investigations were conducted by measuring serum levels and the clearance rate of garenoxacin. The relationship between serum concentrations of garenoxacin and renal clearance was examined as a function of dose. Garenoxacin was eliminated rapidly and non-linearly, reaching a C(max) of 1320

and 3.2 microg/ml after 0.5 and 1 g, respectively. The mean steady-state renal clearance was 18.5 ml/min; this increased with garenoxacin dose. The mean time to reach C(max) decreased with garenoxacin dose, but the average slope of the relationship for garenoxacin clearance vs. garenoxacin concentration was not dose-dependent. One individual displayed an elimination half-life of almost 12 hours. Induction of cytochrome P450 (CYP) 3A4 was observed with doses of 1 and 2 g. Other CYP enzymes were either not induced or were induced only to a minor extent. Induction of CYP3A4 by oral doses of garenoxacin in patients with renal insufficiency correlates with the dose administered and the individual's renal

clearance, which is dose-dependent. On average, garenoxacin does not induce CYP3A4 to the same degree as that seen with conventional CYP3A4 inducers such as carbamazepine and rifampin.Pete's idea of men and women: "I love a spirited girl with a great sense of humor who has something else going on underneath her clothes and in her underwear." And if the body-double, wardrobe, makeup and hair person takes over for a hot actress, Pete will call it "dress-up." So get your own costume and then get your cat
