Q: What's a typical S/N ratio of a single pixel in a camera I am developing an application to correct compressed image. The assumption is that the picture is compressed with JPEG or another standard compression algorithm and then it is stored on a block basis. The file size may be 1 MB or more. Are there any papers or statistics regarding the typical value of a S/N ratio in a single pixel for standard cameras? How many pixels should I expect? How many values should they have? I am particularly interested in high end, professional-grade cameras. This may vary. A: For professional cameras, roughly half the pixels are video, so you should expect half of the image to have the quality of 30dB~40dB. This is the maximum possible signal in terms of digital formats. The final image quality will depend on the image compression algorithm, as well as the compression parameters used. Depending on the image content and colour space, the minimum "required" compression factor will vary. This is roughly speaking. Economist Steve Keen talks at the University of Missouri-Kansas City on June 8, 2012, in Kansas City, Mo. Keen is an Australian associate professor who created a stir among economists with his prediction that a financial crash would come within five years. Related ECONOMISTS are warning that the risks to the global economy have now changed, and that the next recession may be the most severe seen for decades. While the Organisation for Economic Co-operation and Development (OECD) has signalled a slowdown in economic growth, it warned this week that the risks have shifted. In a report out today, the OECD says global growth will slow to 3.3 percent next year, from 3.5 percent this year. That is below its median forecast of 3.6 percent growth next year, and the slowdown will be driven by the US and Europe. China, however, is likely to continue its recovery, and on solid growth of 6.8 percent. The OECD also said the financial markets are in a state of "non-all-clear", with rising losses at financial institutions and the risk of a deeper financial crisis. "Many financial market participants are currently feeling pretty averse to engaging in a flurry of economic activity," OECD chief economist Pier Carlo Padoan said. Guardiola's book, 'My Pep', was released in the United States on Tuesday. According to the Mail On Sunday, Guardiola says the Belgian, who has been in phenomenal form for City this season, is playing poker to win matches and claims City has lost four crucial points from two potentially winning positions in 2016. The newspaper claim Guardiola has confirmed that he has been instructing the City players to adopt a "hidden hand" strategy to win games. Guardiola's arrival at City in July 2015 has been generally regarded as a success story, with the Spaniard becoming the club's first Champions League-winning manager, although some have questioned his unconventional methods and style. Guardiola's early decisions to drop champions league winners Yaya Toure and Mario Balotelli have been cited by some fans as mistakes he regrets, although he rejected criticism of his decision to replace Toure in October and Balotelli a few months later. The book also claims that a final victory in Europe remains Guardiola's intention, with no player keeping secrets of City's Champions League ambitions.The Candy Store The Candy Store or Zhenyingbao (Chinese:⬜⬜⬜, pinyin: Zhenyingbāo
