The state-of-the-art collection of motion capture data has been gathered by a dedicated team of scientists in the UK, working with 14 of Europe's top young footballers to create a database of player characteristics. This data is then used to give players, coaches and FUT players an unprecedented level of realism and accuracy when attempting to predict and perform moves and tackle actions on the pitch. The "FIFA Player Ratings" you will see on-screen come from an average of 10,000 GPS-enabled player attributes: speed, acceleration, evasion, first touch, strength, balance, collision detection, stamina, tactical intelligence, close control and key passes. Now you can see just how differently players such as Lionel Messi and Wayne Rooney perform in real-life. Plus, you can also see who in the squad is the fastest or strongest, or the most 'tactical' when it comes to running with the ball and dodging out of a tackle. The 'HyperMotion' data will help you better understand all of these attributes, giving you a more complete insight into the characters of each player. You can also assess
