These files were made by people, as you can see: 2.38618E+11Â And their contents are also binary: 7.2553E+11Â EDIT: As Jack Shafto suggested, these files are probably Â·jpg and Â·png files with data embedded and not Â·otf or Â·ttf fonts. A: Those files have a non-ascii character at the end of the file name - just delete it. The text itself, to me, looks like it's misformatted data. I have no idea if that's what's supposed to be there or not. Nanostructured platinum/hydrogen complexes: potential nanocatalysts for heterogeneous catalysis. Coordination-driven shape-selective functionalization of platinum nanoparticles (NPs) has been reported extensively for the production of NPs with heterogeneous surfaces. Recent studies have

investigated the interaction of hydrogen with platinum surfaces in aqueous environments with the ultimate goal of engineering active hydrogen transfer surfaces. The formation of platinum-hydrogen complexes (Pt-H) with organic and organosilica supports of different morphologies has been demonstrated. These emerging catalytic materials are promising platforms for novel applications, such as in heterogeneous catalysis and in energy-related fields. While the gas-phase stability of the Pt-H complexes has been studied extensively, very few studies have attempted to understand the complexation and dissociation of these molecules in
