Roblox is a video game platform and game creation system developed by Roblox Corporation that allows users to program games and play games created by other users. Created by David Baszucki and Erik Cassel in 2004 and released in 2006, the platform hosts user-created games of multiple genres coded in the programming language Lua. For most of Roblox's history, it was relatively small, both as a platform and a company. Roblox began to grow rapidly in the second half of the 2010s, and this growth has been accelerated by the COVID-19 pandemic. Roblox's first sandbox was released in May 2006, and the company began making games on Roblox in September of that year. The platform grew to the point that Roblox replaced AOL in the spring of 2009 as the largest hosted game service on the web. After a beta test period in October 2009, the site went live in January 2010. As of June 2016, Roblox's userbase had grown to over 65 million. In July 2010, Roblox's first game received attention when it received more than 10 million plays. The game was a cover version of a popular song. In November 2010, Roblox became publicly traded on the NASDAQ. In early 2011, the company released its first game for mobile devices, a loose port of a popular iPhone game, Tap Tap Revenge. The game was widely successful and has been downloaded over 700 million times to date. In January 2011, Roblox was the third-most visited website in the United States. In February 2012, Roblox released its first "block party" game, The Sink, which combined user-created objects with programming code. Although the game came with an in-game currency system, it remained free to download. By August of that year, the game had been downloaded more than four million times. In October 2012, Roblox released Roblox Build-It, a program that allowed users to create content for the platform. In December 2012, Roblox released a significant update to its website design. That same month, Roblox became the first game to have over a million concurrent players. In June 2013, Roblox introduced a children's version of the site, called "Roblox Kidz." That same month, Roblox was cited by Bloomberg Businessweek as the 7th-biggest technology company in the world, just behind Google, Apple, Amazon,

Well I'm back at it. I have finally finished Pokemon Sun and Moon and I knew it was going to be a long journey to get some robux to get the best stuff out of the games and I'm pretty sure I just did that. This is a video if you guys are thinking of getting the games the safe way I wrote this video which tells you about it. If you're not please hit the thumbs down and stop. When people are asking for my opinion about the differences between Sun and Moon I find it interesting because they're so similar and obviously, you can only get as good as your previous games. The story generally is the same: You play a character that's been called upon by the Overlord and given a chance at training so they can be the next Legend. That is where the story differences end the game is relatively the same: At night time when the enemies are at their strongest, you go out and catch them in the wild. As you catch them you raise your friendship with that Pokemon and that's how you evolve it. When you win a Gym battle against one of the six starters you learn their moves, after that you can catch the moves of any Pokemon that has been caught and released. In Moon's version of this the starter Pokemon have different evolutionary moves while Sun's starter has the same moves as all the others. Despite all the similarities, I love this game because it's not like most other pokemon. Not only is it the first time a trainer is called to become the next legend but it's also the first time the game has a relationship with a person. And I have played Sun and Moon 3 times each, I'm pretty sure that's already
